EDUCATION

2023.09-2027.06 Guangdong University of Technology Industrial Software

GPA: 3.84/5 Core Courses: Machine Learning, Probability & Data Analysis,

技能: Python (Numpy/PyTorch/Pandas/Matplotlib), VBA, SQL, openclaw 🐙
Claude Code CLI (Skills/Agent Teams/Prompt Engineering), SAP

Languages: English (CET-6: 541/750) ; Overseas travel experience, capable of working in English

INTERNSHIP EXPERIENCE

2025.12-2026.03 Mars (China) Information & Communications Technology Center

- **Tax Data Warehouse & Automated ETL Pipeline:** For Mars Finance tax reporting, built an end-to-end Hive pipeline from SAP data extraction to audit report output; developed VBScript for one-click parameterized data fetching, used Python & Hive SQL for multi-source data processing and automated reporting, cut monthly workload from ~100h to 5h.
- **P&L Data Prediction :** Addressed the "gap days" data misalignment between Global P-Calendar and natural months. Extracted GL line items from SAP FBL3N, constructed 10+ features (e.g., Profit Center), and trained an LSTM time-series model. Achieved <4% MAPE in backtesting, supporting accurate global tax and net profit forecasting.
- **Enterprise AI Assistant based on Claude :** Developed an intelligent contract review agent for Legal/Procurement using Claude. Designed orchestration logic and custom Skill tools to automate key term extraction (Payment/Compliance) and risk comparison. Piloted with ~50 users , significantly streamlining the review timeline.
- **PRC & US GAAP Account Management System:** For Mars North Asia Finance' s dual-GAAP accounting, developed a lightweight SQLite account management system to address decentralized PRC/US account status maintenance pain points; designed table schema and built SQL queries & views for one-click account status filtering, batch updates and verification; cut verification time from 20 mins per check to 10 secs, covered 3000+ GL accounts, and reduced account misuse risks.

PROJECT EXPERIENCE

2025.08-2025.12 Flash Memory Performance Analysis Platform

- **Data Modeling & Performance Analysis:** Aggregated MQSim simulation logs into an SSD performance dataset (IOPS, bandwidth) using SQL. Performed data cleaning and bottleneck identification with Python through distribution and time-series analysis.
- **Visualization Dashboard:** Built a Power BI dashboard to visualize SSD metrics (IOPS, latency) across timelines and workloads for rapid anomaly detection.
- **Correlation Analysis:** Constructed a performance feature matrix using Python (NumPy, Matplotlib) and generated Pearson correlation heatmaps to identify key metric relationships.

CAMPUS EXPERIENCE

2023.09-2025.08

Guangdong University of Technology

Class Monitor

- **Responsible for class committee coordination:** Organized and hosted multiple team-building activities (500+ participants). Led the class to win the Second Prize in the Class Style Construction Competition as the primary person in charge. The Class under my management was awarded the "Top 100 Class of GDUT."

HONORS & AWARDS

- - Second-Class Academic Scholarship (Top 10%) × 2
- - Outstanding Student Leader Scholarship (Top 6.7%)
- - Tianrun Outstanding Student Leader Scholarship (Top 3.3%)
- - Utility Model Patent (1 Item)
- - NCRE Certificate Level 2 (Excel)
- - Mandarin Proficiency Test Certificate (Level 2-A)
